AND MANAGEMENT, BHUBANESWAR

DEVELOPMENT OF  
COURIER MANAGEMENT SYSTEM

A Project Submitted to Rajdhani College of Science, Technology  
& Management, Bhubaneswar in Partial Fulfillment of the  
Requirements for the Degree of

**Bachelor of Computer Application**

By

Jyoti Ranjan Biswal	(2004000629127030)
Debashish Das	(2004000629127034)
Debasmita Sahoo	(2004000629127028)
Renubala Pradhan	(2004000629127035)

Under The guidance of

**PROF. JANANA RANJAN BEHERA**

Department of Bachelor of Computer Application

**SESSION 2020-2023**

## ACKNOWLEDGEMENT

An idea is the first step for generation & development of anything. The initial idea may have been of any one person , but the development & improvement on it have always been a result of hard work , help, inspiration and blessings of several different people.

We would like also like to thank our project guide **PROF. JANANA RANJAN BEHERA** , Head (I/C) Department of **B.C.A** , **Utkal University** who never hesitated in extending their sincere co-operation from time to time to prepare an interesting and challenging project.

The guidance and support received from all the teaching and non-teaching staff of the Department of Computer Science was vital for the success of the project .We are also thankful to our family and friends for their continuous support and encouragement throughout the course. We take this opportunity to express my gratitude to the people who have been instrumental in the completion of this project.

Jyoti Banjan Biswal	(2004000629127030)
Debashish Das	(2004000629127034)
Debasmitta Sahoo	(2004000629127028)
Renubala Pradhan	(2004000629127035)

## CERTIFICATE

RAJDHANI COLLEGE OF SCIENCE, TECHNOLOGY  
AND MANAGEMENT, BHUBANESWAR

This is to certify the project entitled " **DEVELOPMENT OF COURIER MANAGEMENT SYSTEM**" submitted by **Jyoti Ranjan Biswal** (2004000629127030), **Debashish Das**(2004000629127034) **Debasmita Sahoo**(2004000629127028) , **Renubala Pradhan** (2004000629127035) to **Utkal University**, Odisha for partial fulfillment of the award for BCA is bonafied project work carried out by them under my supervision. The results presented in this project have not been submitted elsewhere for the award of any other degree.

In my opinion this work has reached the standard fulfilling the requirements for the award of the degree of BCA in accordance with the regulation of the university.

Date :

Prof. Janana Ranjan Behera

Dept. of BCA

GUIDE

## CERTIFICATE OF APPROVAL

The foregoing is hereby accepted as a credible study of an engineering subject carried out and presented in a manner satisfactory to warrant its acceptance as a prerequisite to the degree for which it has been submitted . It is understood that by this approval the undersigned do not necessarily endorse or approve any statement made, opinion expressed or conclusion drawn there in put approve the project for the purpose for which it is submitted.

INTERNAL EXAMINER

EXTERNAL EXAMINER

## DECLARATION

We declare that this written submission entitled" **DEVELOPMENT OF COURIER MANAGEMENT SYSTEM**" represents our ideas with our own words other ideas or words have been included. We have adequately cited and referenced the original sources.

We also declare that we have adhered to all principles of academic history and integrity and have not misrepresented or fabricated or falsified any idea/data/fact/source in our submission. We understand that any violation of the above will be cause for disciplinary action by the institute and can also evoke penal action from the source which have thus not been properly cited or from whom proper permission has not been taken when needed.

Debashish Das	(2004000629127034)
Debasmita Sahoo	(2004000629127028)
Renubala Pradhan	(2004000629127035)

## **ABSTRACT**

This **Courier Management System** Project will have different modules. The login section will have login facility for the admin and for the user who will operate this system. While taking orders from its customers, it will take all the details of its customers who is placing the orders and all the details for the recipient such as its address, name, mobile number. Through the tracking id, customers or its recipient will able to track their products from any location using internet. It will provide status of the product after placing orders within 1 minute. The admin can manipulate the data through admin login page and add any new consignment if required. The profile section shows the data of the user and the pricing section of the project shows the price that will be charged for the consignment according to the weight categories.

Using the courier service person can easily send his/her parcel to other person in the particular destination within the time.

# **CHAPTER 1**

## **Introduction**

This Courier Management System Project will have different modules. The login section will have login facility for the admin and for the user who will operate this system. While taking orders from its customers, it will take all the details of its customers who is placing the orders and all the details for the recipient such as its address, name, mobile number. During billing process system will generate a tracking id for their products. Through this tracking id, customers or its recipient will be able to track their products from any location using internet. It will provide status of the product after placing orders within 1 minute.

The courier service is one of the solutions of these problems. It is used to send some things to any person in the world within time. The courier company has number of branches, which are spread over the country or the world. So that when person wants to send things then he has to contact at nearest courier service branch. The courier company creates the schedule & gives internal/external services. The courier service works as destination office or source office.

In modern age, as time increases, needs & requirements of the person are also increased. They want more facility & try to do their task quickly & within time. But they can not get all the things at nearest market or area, so they have to import the things from any place in the world. Within the country, the things can be imported through post service. But it consumes the time & sometimes problem of damage or missing occurs. Whereas in the international market, the one way is shipping. But it also requires more time.

### **Motivation behind this project:**

To gain maximum business region, customer demands good service. So to make more profit and gain maximum business region, their administration must also have a system to tackle all these problems on time. Its administration can take immediate orders and provide a receipt which will include all the details of the products along with appropriate price to their customers. Thus saving time and eliminating line making process.

### **Features of Purposed System:**

These are the important features of the project Courier Management System:

- ☐ In computer system of the courier service computation of the rate is easily & quickly done.
- ☐ Computer system of the courier service provide fast access.
- ☐ Using this computerized system, bill issued procedure becomes fast.
- ☐ In computer system the person has to fill the various forms & number of copies of the forms can be easily generated at a time.
- ☐ In computer system, it is not necessary to create the Manifest but we can directly print it, which saves our time.
- ☐ It contain better storage capacity.
- ☐ Accuracy in work.
- ☐ Easy & fast retrieval of information.
- ☐ Well designed reports.
- ☐ Decrease the load of the person involve in existing manual system.
- ☐ Access of any information individually.
  - Work becomes very speedy.
  - Easy to update information.

## CHAPTER 2

### REQUIREMENTS

#### **System Requirements:**

##### **Software Requirement:**

- Apache Server 2.0
- PHP Version 5.3 or above
- MySQL Version 5.5 or above
- Latest browser : Chorme, Firefox, Safari etc
- Operating System : Any (Linux, Windows, Mac etc)

##### ***Hardware Requirements:***

- Processor Pentium IV or higher version.
- Ram 128 MB or above
- Hard Disk 150 MB or above

## CHAPTER 3

### ENTITY RELATIONSHIP DIAGRAM

An **Entity–relationship model (ER model)** describes the structure of a database with the help of a diagram, which is known as **Entity Relationship Diagram (ER Diagram)**. An ER model is a design or blueprint of a database that can later be implemented as a database. The main components of E-R model are: entity set and relationship set.

#### **What is an Entity Relationship Diagram (ER Diagram)?**

An ER diagram shows the relationship among entity sets. An entity set is a group of similar entities and these entities can have attributes. In terms of DBMS, an entity is a table or attribute of a table in database, so by showing relationship among tables and their attributes, ER diagram shows the complete logical structure of a database.

The geometric shapes and their meaning in an E-R Diagram. We will discuss these terms in detail in the next section(Components of a ER Diagram) of this guide so don't worry too much about these terms now, just go through them once.

**Rectangle:** Represents Entity sets.

**Ellipses:** Attributes

**Diamonds:** Relationship Set

**Lines:** They link attributes to Entity Sets and Entity sets to Relationship Set

**Double Ellipses:** Multivalued Attributes

**Dashed Ellipses:** Derived Attributes

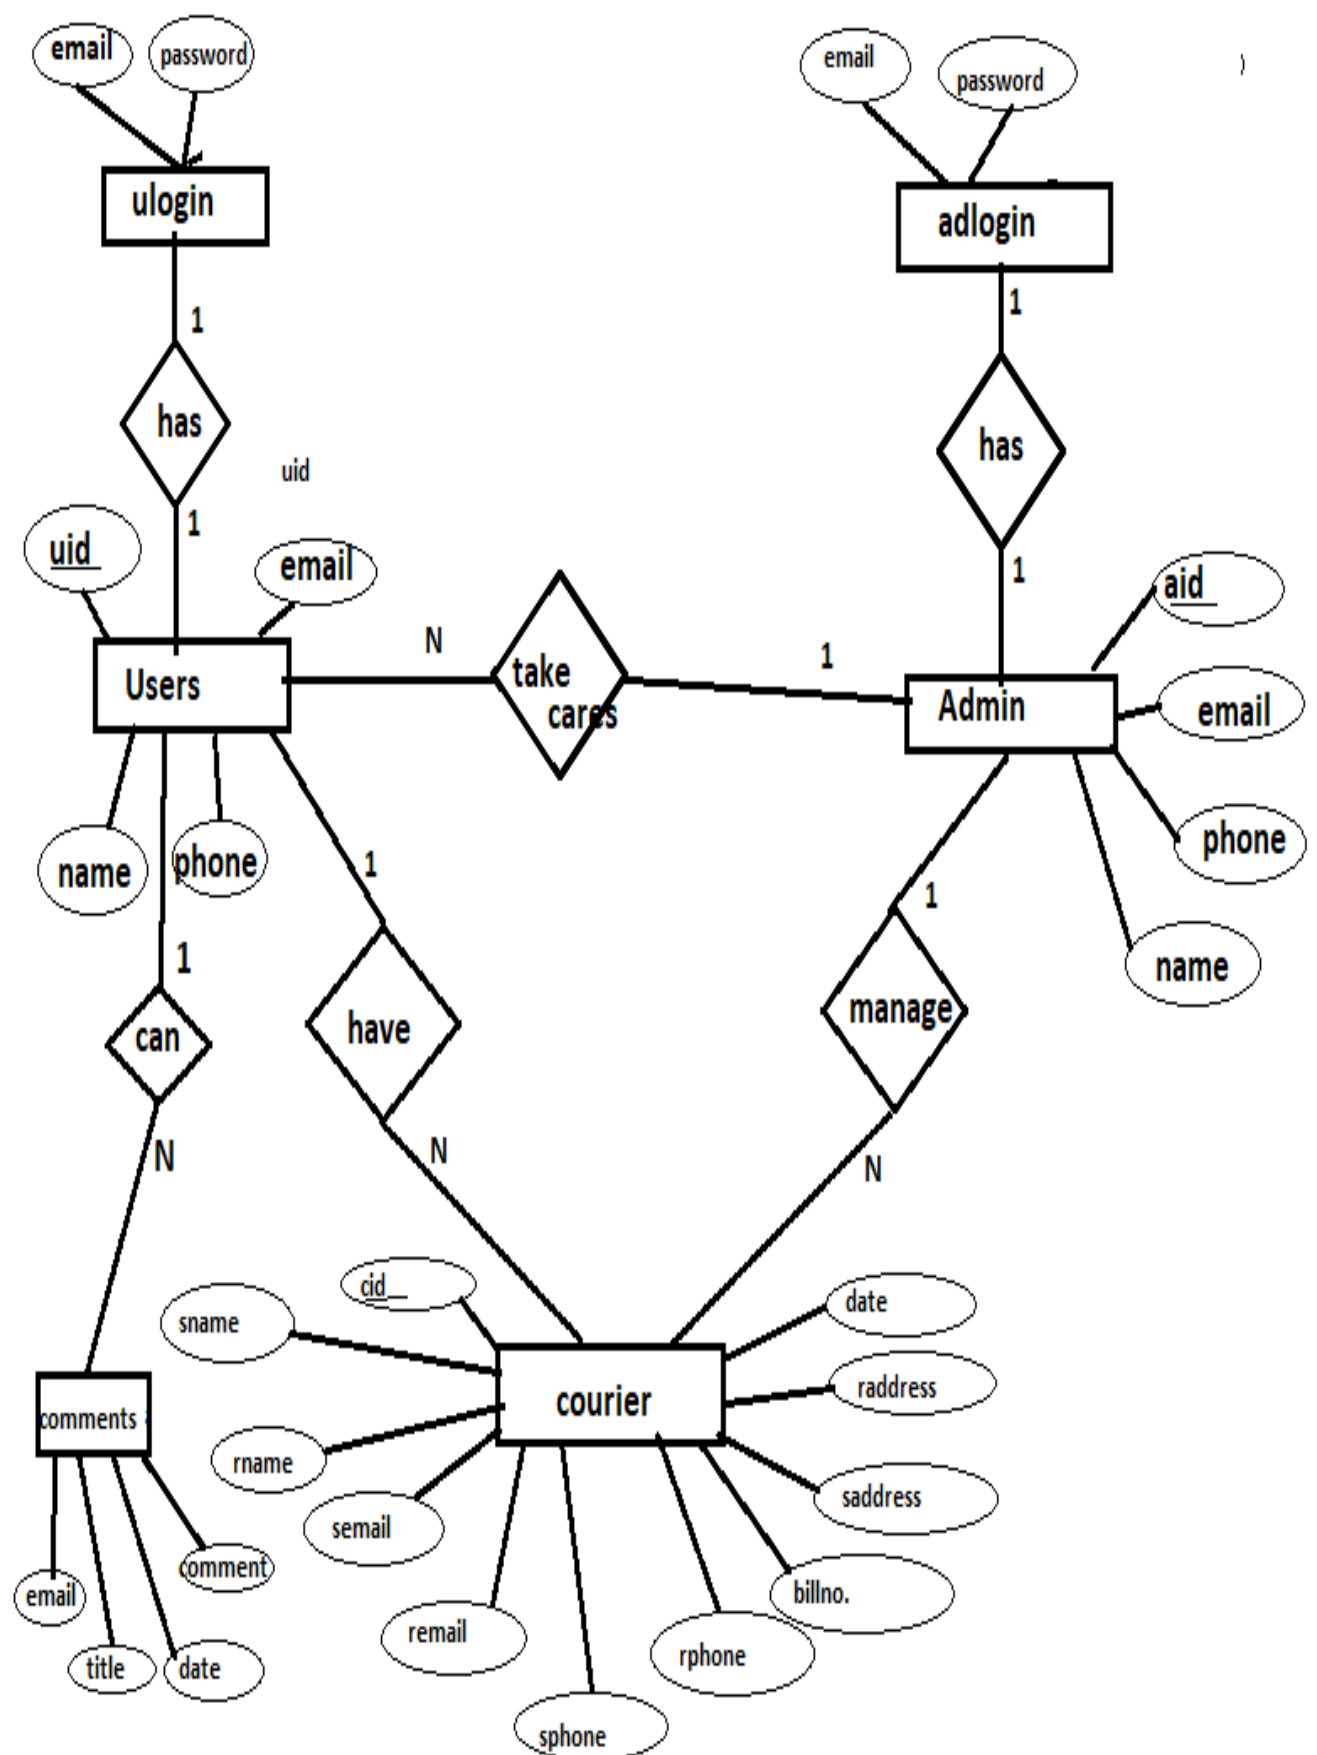

**Double Rectangles:** Weak Entity Sets

**Double Lines:** Total participatio

ER of an entity in a relationship set

Components of ER Diagram

# **CHAPTER 4**

## **ENTITY RELATIONSHIP SCHEMA DIAGRAM**

A database schema is the skeleton structure that represents the logical view of the entire database. It defines how the data is organized and how the relations among them are associated. It formulates all the constraints that are to be applied on the data.

A database schema defines its entities and the relationship among them. It contains a descriptive detail of the database, which can be depicted by means of schema diagrams.

An Entity-Relationship Model (ERM) is an abstract and conceptual representation of data. Entity-relationship modeling is a database modeling method, used to produce a type of conceptual schema or semantic data model of a system, often a relational database, and its requirements in a top-down fashion.

In order to create an ER schema you must know three main concepts: entity, attribute and relationship.

### **Entity**

Entity is the central concept of the Entity-Relationship model. An entity represents a description of the common features of set of objects of the real world. Examples of entities are Person, Car, Artist, and Album.

### **Attribute**

An Attribute represents the properties of real world objects that are relevant for the application purposes. Attributes are associated with the concept of Entity, with the meaning that all the instances of the entity are characterized by the same set of attributes. In other words, the entity is a descriptor of the common properties of a set of objects, and such properties are expressed as attributes.

### **Relationship**

A Relationship represents semantic connections between entities, like the association between an artist and his/her album, or between an artist and his/her reviews.

The possible values are one and many. Based on their maximum cardinality constraints, relationships are called

1. "one-to-one", if both relationships roles have maximum cardinality 1,
2. "one-to-many", if one relationship role has maximum cardinality 1 and the other role has maximum cardinality N,
3. "many-to-many", if both relationships roles have maximum cardinality N.

## E-R Schema Normalization

E-R includes some concept that are not minimal but which can be specified through the usage of the three main concepts of the ER Schema. These concepts are:

- Multi value attributes.

Attributes of an object that can take a set of values represented by an entity and a relationship

- Composed attributes.

Attributes with an internal structure (i.e, an address can include different fields), represented by using an entity and a relationship

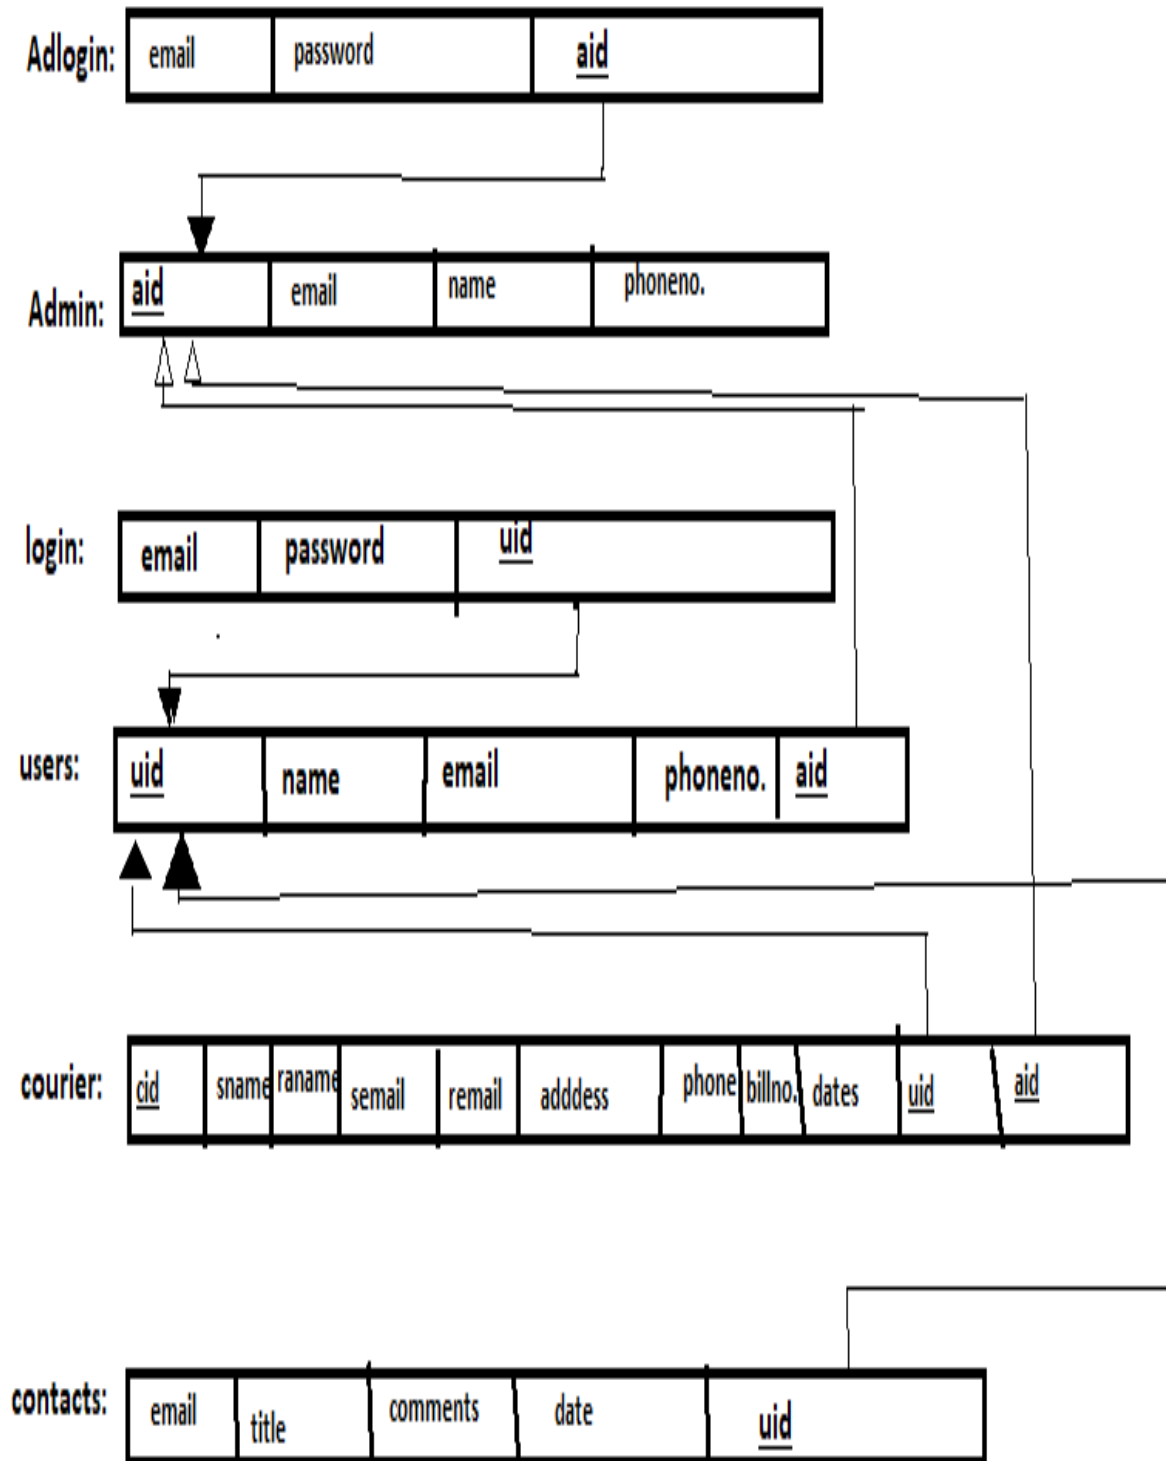

- N-ary relationships.

Represented by a central entity and two reports

- Relationships with attributes.

Relationships involving N entities

## **IMPLEMENTATION**

### **FRONTEND CODE**

#### **INDEX.PHP**

```
<?php

require_once "dbconnection.php";
require_once "session.php";

if ($_SERVER["REQUEST_METHOD"] == "POST" && isset($_POST['submit'])) {

    $email = $_POST['email'];
    $password = $_POST['password'];

    $qry = "SELECT * FROM `login` WHERE `email`='$email' AND
`password`='$password'";
    $run = mysqli_query($dbcon, $qry);
    $row = mysqli_num_rows($run);
    if ($row < 1) {
?>
        <script>
            alert("Opps! plz Enter Your Username and Pswd again..");
            window.open('index.php', '_self');
        </script> <?php
    } else {
        $data = mysqli_fetch_assoc($run);
        $id = $data['u_id']; //fetch id value of user
        $email = $data['email'];
        $_SESSION['uid'] = $id; //now we can use it until session destroy
        $_SESSION['emm'] = $email;
        ?>
        <script>
            alert("स्वागत हैं आपका □");
            window.open('home/home.php', '_self');
            // changes made here
        </script> <?php
    }
}
?>
```

**END OF IMPLEMENTATION CODE OF THE PROJECT**

## **CONCLUSION**

System development is also considered as a process backed by engineering approach. We have tried to incorporate & develop new particles for our education particles have been followed not during the but coding but also during the analysis, design phases & in documentation.

Courier agency is considered as an expansion of business relations. It contributes a lot by providing quick & fast services of sending documents letters (formal & informal both) to business as it enables any business to flourish.

Following modification or upgrades can be done in system.

- 1) More than one company can be integrated through this software.
- 2) Web services can be used to know exact delivery status of packets.
- 3) Client can check the repacked delivery status online.
- 4) Distributed database approach in place of centralized approach.
